Quantum-Safe Encryption Over Cellular Infrastructure Tunnels

Paper ID Reference: PAP-2026-003

Authors: Contact Author 3, Co-Author 4

Abstract: This work introduces post-quantum lattices to secure mobile base station transit channels against intercept-now-decrypt-later attacks.

1. INTRODUCTION: Recent advancements in AI systems require specialized benchmarking and flow-control safety bounds. This paper details our methodology, design specifications, and test results.

2. METHODOLOGY: We establish secure sandboxes and expose APIs over local channels, observing execution behavior across various stress matrices.

3. RESULTS: Our experiments demonstrate strong resilience, yielding notable efficiency gains of up to 18% in baseline routing tasks.
